**Data Accessibility & Analytics**

# Data Strategy

Data Strategy begins at the intersection of IT and the Business.

# Data Storage

Goal is to store key Financial data sets from a fragmented systems landscape and store that data in a single integrated location

Data Lake

Collection of raw unrefined data from a diverse array of source systems

Data Mart

Refined "gold" data sets that are suited for complex queries and stringent performance requirements

# Data Governance

For data driven decision making to occur, an organization must first view their data as an asset.

Data Quality

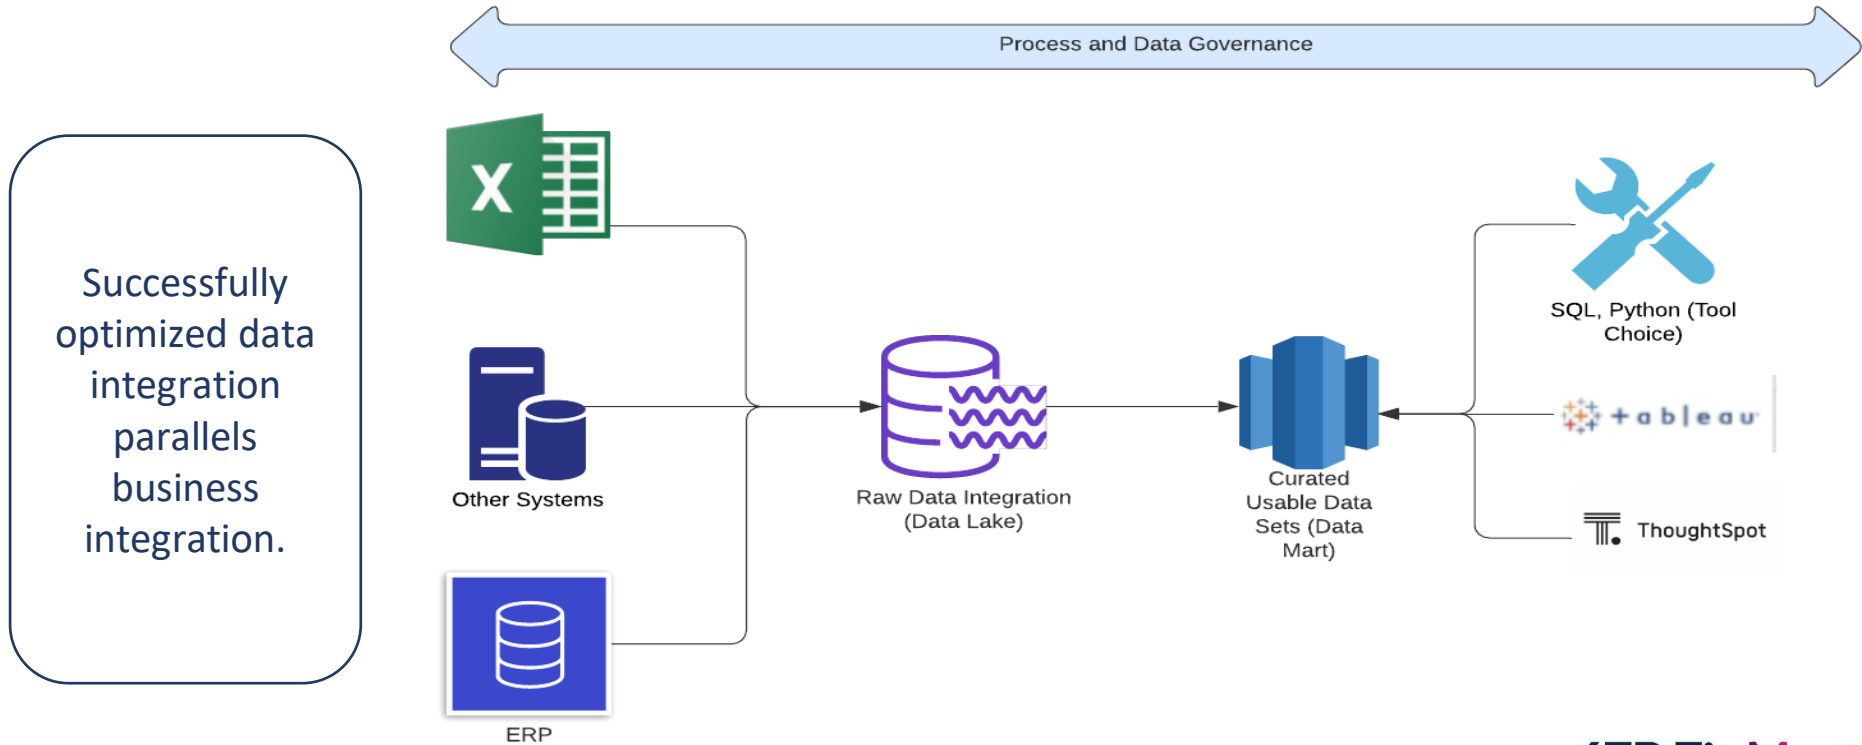

Data Ownership

Data Security

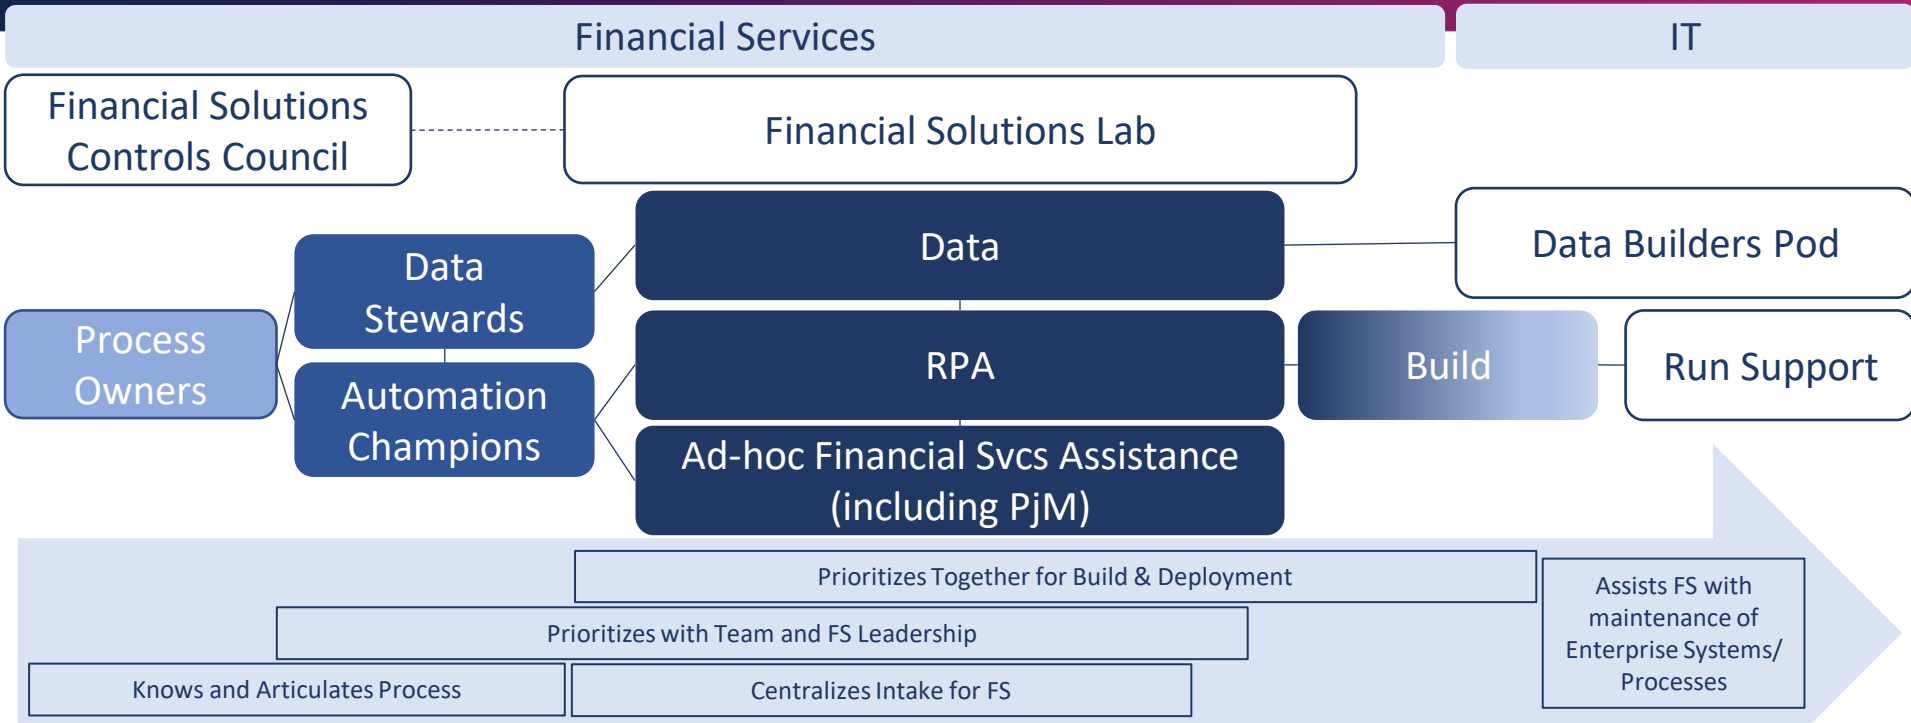

Data Architecture

Data Integration

# In Practice: Speaking with One Voice

# Reimagining Data Strategy

# Action Steps for Reimagining Data Strategy

- Vision cast around your organization's Finance of the Future
- Identify individuals within Finance that are tech savvy
- Open the dialogue with IT around the role Finance would ideally play in data and technology
- Be the catalyst to partner across your enterprise to further the idea of "data as an asset"
- Start from where you are in building analytical insights with your current resources. It's a journey but this will help you begin to identify opportunities sparking further organization-wide discussion
